\* Based on an initial payment of the HST followed by 11 monthly payments

## The Royal Advantage

The additional preventive screening in the Royal Package makes it ideal for the distinguished older patient or for those at higher risk of health issues.

### Biannual Health Exam

Pets age considerably faster than people so a complete physical every 6 months can detect subtle changes early on.

### Full Blood and Urine Profile

40 different parameters are tested in a full blood panel along with a complete analysis of the urine. This allows us to get an overall picture of your pet's internal health.

### Thyroid Screening

Many dogs may develop thyroid disease as they get older. This blood test is the first indication that problems may be developing.

### Blood Pressure

High blood pressure is often a symptom of underlying problems such as kidney disease.

### Eye Testing

As dogs age, their tear production decreases. This can cause a painful condition known as Dry Eye. Simple tests can monitor tear production as well as check for glaucoma.

### X-rays

Conditions such as heart disease, arthritis and bladder stones can be both diagnosed and monitored with routine radiographs.
